

A fully interactive experiential learning platform that closes the gap between the theory and practice of medicine.

A memorable way for your students to practice core clinical competencies on demand in a safe virtual clinical environment, reflecting start-to-finish patient management.

120+ peer-reviewed cases

“ CyberPatient allowed me to take control over the whole continuum of care and not only the diagnosis or the treatment part. This approach broadened my understanding of the intricacies of healthcare besides deepening my clinical competencies and reflexes. ”

- Dr. Saad CHAIBI, Morocco -

Public Health Officer, WHO; former Vice President for Public Relations and Communications, IFMSA; former National President IFMSA, Morocco.

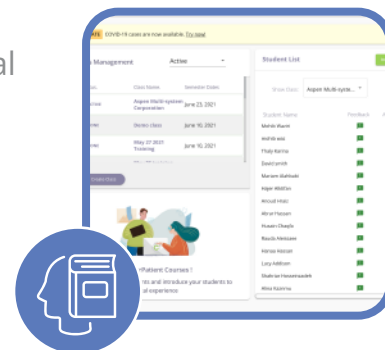

Curriculum Supporting Solution

- **120+ peer-reviewed cases** in a gamified virtual hospital covering the full continuum of patient care, available on demand.
- **750+ additional educational resources** including curricular modules, videos, lectures and more that simulate a skill or clinical competency.
- **7000+ diagnostics and animated assets** for students to practice and review physical examination, procedures, surgery, diagnosis, and treatment.

Aligned Learning Objectives

- **Provides a solid base for the transfer of knowledge** through experiential learning in a safe ethical environment.
- **Strengthen curriculum and learning outcomes** by aligning with case objectives, while tracking learners' development.
- **Review student performance and provide formative feedback** and summative assessment in the Case Management System.

Efficient Experiential Learning

- **Supports patient availability 24/7** and increases student/patient interaction time compared to 'Standardized Patient' method.
- **Reduces costs** to educational institutions and unnecessary risk to the healthcare system.
- **Provides a flexible and accessible solution** for online distance education of practical skills.
